

# Safe Sense 3 – Smart Sensor System

Sustainable fall prevention for utmost safety. From a bed exit sensor system to a digitalisation platform.

The nursing shortage is already a reality in many communities worldwide. The number of people in need of care is rising rapidly while, at the same time, there is not enough nursing staff available to successfully cope with this development.

Taking up the trend and challenge of digitalisation early on, wissner-bosserhoff has been gathering valuable experience with the SafeSense® bed exit sensor system and the sentida 7-i intelligent nursing home bed since 2014.

During this time, SafeSense® has matured into a care assistant with further valuable functionalities and is recommended as future-proof digitisation platform due to its open architecture. This architecture can be easily retrofitted with even more functions that additionally relieve the care givers.

SafeSense® 3 optimises information and time management in everyday nursing care by means of automatically processed health data. This data facilitates nursing decisions and documentation while, at the same time, relieving the burden on nursing staff.

## Product Features:

### Real-time movement monitoring:

- Effective pressure injury prevention, including data visualisation
- Individual positioning
- Reduction of repositionings
- Reduction of control rounds

### Bed exit monitoring:

- For effective falls prevention, including data visualization.
- Individual nurse call timing
- Fast reaction in case of bed exit / falls
- Reduction of the consequences of falls

### Reliability into the future:

- Flexible IT architecture
- Can be retrofitted with further sensor systems
- Regular software updates

### Digital care in real time

- All residents in view around the clock
- Detect problems early, such as disturbed sleep, pain or stress
- Prioritisation of process flows
- Support with documentation

### Technology you can "touch"

- Continuous real-time resident monitoring
- Contactless data acquisition and visualization
- Differentiated call management for faster prioritisation
- Bed presence – Is the resident in bed – YES or NO

### 360° networked care

- Relief of your nursing staff for the wellbeing of your residents
- Movement monitoring, Bed exit monitoring

## Specifications:

Product Code	10-0835	50-0880
Type	Integrated	Stand-Alone
